VIDEOSURGERY

Dear Friends and Colleagues,
Dear Readers,

We are very pleased to announce that starting from this issue, **Central European Journal of Urology** will include a new permanent section entitled **"Videosurgery"**. Progress in the process of publishing and presenting scientific information imposes changes that must also take place in the **Central European Journal of Urology**. As urologists, we must be prepared to accept the new ways in which science is being presented.

The **"Videosurgery"** section, led by Dr. Erdem Canda, faces a huge task. We have ambitious plans, as we do not only want to present single, very interesting and difficult cases, so-called "Case Reports", because this will have no effect on the scientific development of the journal. The **"Videosurgery"** section must exist as an important link between knowledge presented in original scientific papers and clinical practice. This is a very important undertaking for the section. **"Videosurgery"** should act as a bridge connecting scientific theory and practice. In our understanding, it is for these reasons that the section has been created and only such a perception of this department will bring success for the journal in the form of real interest, which will translate into an increase in the number of citations and prestige of the journal.

A. Erdem Canda,
*Videosurgery
Section Editor*
